

## Reforming Pitch Fibre Drains

AN IMPORTANT SERVICE FROM **DRAINOLGY...**

# DEFORMED PITCH FIBRE DRAINS REFORMED

**WITHOUT DIGGING !!!!!!!!!!!!!**

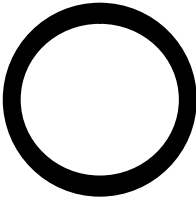

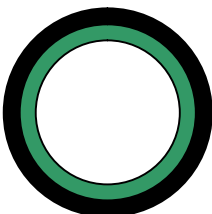

Many houses that were built in the late 1960s and early 1970s have pitch fibre drains. Perhaps this applies to your home.

Pitch fibre drains soften, crush, blister and deform until blockages become an everyday headache. Until now, the only solution has been to dig them up and lay new pipes – very expensive, disruptive and time-consuming work.

Now 21<sup>st</sup> Century technology allows **DrainOLGY** to effectively repair these drains without digging – backed up by a 15-year guarantee.

**MORE GOOD NEWS!** - Until quite recently, Insurance Companies usually dismissed such problems with pitch fibre drains as “wear and tear” and thus not covered by Property Insurance policies. However, following the Insurance Ombudsman’s advice, some **Insurance Companies are now paying for these drains to be repaired** – but how long this will last we don’t know.

### How Is it Done?

Pipe Profile	Process Stage
	<b>Stage 1</b> Deformed pitch fibre pipe, with blisters along the invert, resulting in repeated blockages.
	<b>Stage 2</b> Blisters cut out
	<b>Stage 3</b> Pipe shape reformed
	<b>Stage 4</b> Pipe relined with <b>DrainLINER</b> structural CIPP liner to enhance structural integrity and to improve flow characteristics.

**BEFORE**

**AFTER REFORMING AND RELINING**
